

# MART Chemical Injector Pump

The MART Corp. can now upgrade all MART Power Washers equipped with rinse system with a chemical injector pump system. The chemical injector pump will inject a metered amount of Power-Kleen RI into the rinse water to stop rusting and provide a short term rust protection. The chemical injector pump allows adjustment of the flow rate of chemical injected into the rinse water. It delivers Power-Kleen RI at very precise dosage rates (per minute). When you use the Power-Kleen RI with injector pump it will work with other manufacturer chemistries. Installation is as simple as mounting injector pump bracket and connecting the electrical and provided fluid connects to the Power Kleen RI container & Power Washer.

**MART Part #71538 Chemical Injector Assembly**

**MART Part #52837 Power-Kleen RI 5 gallon**

**MART Part #52838 Power-Kleen RI 55 gallon**
